

TL-ROLLER-P

6-10mm Plastic LED Installation Roller

PRODUCT OVERVIEW

Designed to streamline LED strip installations, this 6-10mm installation roller is ideal for applying SMD LED strips quickly, evenly, and with consistent pressure. The dual-wheel design helps press strip firmly into aluminium profiles and mounting surfaces without placing direct pressure on the LEDs themselves, reducing the risk of damaging diodes during installation. Lightweight, compact, and easy to handle, it improves installation speed while helping achieve a cleaner, more professional finish on every job.
